

This homework is due on Monday, 7/23, in class, by 6:00 pm.

Homework 2

Note: Warm-up problems do not need to be turned in.

Exercise 1 Warm-up by solving a couple of problems among problems 1-8, section 2.1. Don't simply apply the formulas from the textbook: try solving the equations by yourself! Also try drawing their slope fields, and compare your sketch to the answers in the textbook.

Exercise 2 Solve problems 30 and 31, section 2.1.

Exercise 3 Read the *Historical Note* in section 2.1 (examples 4 and 5). Then solve problems 36 and 37 in the same section (you may want to use a calculator on this one!).

Exercise 4 Solve problem 39, section 2.1. When constructing the graph, you may choose specific values of k , b and P_0 for your comparison (just keep it reasonably realistic: b should be small relative to k and P_0). If you have access to a graphing calculator, try plotting various graphs of the two populational models for different triples (k, b, P_0) (you do not need to turn in many graphs, one is enough).

Exercise 5 Solve problem 23, section 2.2. Note: this problem is qualitative, and should be treated as such. You do not need to compute the limiting populations by hand (although you could certainly solve the problem in this way).

Exercise 6 Section 2.3, problem 10.

Exercise 7 Section 2.3, problem 12.

Exercise 8 Read the subsections on *Variable Gravitational Acceleration* and *Escape Velocity*, section 2.3. Then solve problem 30 in the same section.

Exercise 9 Read the subsection *A Word of Caution*, in section 2.4. Then solve problem 29 in the same section (again, you may want to use a calculator).

Exercise 10 Read example 1, section 2.5. Then read the note after example 4.

Exercise 11 Read example 4, section 2.6.

Exercise 12 Read Appendix A1, until example 2. Solve a few of the problems between 1 and 12 in the appendix, as a **warm-up** (and review of *Power Series* and *Taylor Series*).

Exercise 13 Solve problem 15 in appendix A1.

Exercise 14 Solve problems 14 and 15, section 3.1.

Exercise 15 Read theorems 2 and 3 in section 3.1. Then solve problems problem 29 and 30.

Exercise 16 Problem 32, section section 3.1.

Exercise 17 Section 3.2, problem 16.

Exercise 18 Section 3.2, problem 24.

Exercise 19 Section 3.3., problem 34.

Exercise 20 Section 3.3, problem 38.

Exercise 21 Section 3.3., problems 40 and 42. Justify your reasoning.
